

Turn-key solutions: Standard rectangular pools

- Pool shells are of solid 20 cm double reinforced premium strength concrete.
- Pool quality 4" x 4" ceramic tiles and sandwash coping.
- Quality pumps and filters. Automatic pumping.
- Special filter medium (fused silicon dioxide) with 30 times the performance of sand, greatly reducing the regular service of the pool water, and pumping cycles
- All pools can include fully automatic, self-cleaning saltwater chlorinator equipment that produces chlorine and algaecide at no cost.
- Pools are fitted with a correctly calculated number of underwater lights that takes into the account the refractive index of the depth of the water.
- Fully guaranteed for materials and workmanship.
- Short construction time: approx. 1 day per sq. metre.
- Convenient payment plan.
- Our customer service is second to none - we speak native English, German, and French, and our products carry up to a 10-year guarantee.

Custom designed pools

Special Designs

SiamConsulting will be pleased to provide a quotation for custom free-form, infinity-edge and special designs with waterfalls and other aqua and lighting features, including landscaping suggestions.

Commercial and Large Pools; Multiple Pools

Complete solutions for any project stage can be offered for condos, hotels, resorts, housing projects and sport complexes. The consultation may incur a fee which will however, be fully refunded on confirmation of order.

All our pools are designed in direct consultation with our clients. Our aim is to remove the 'luxury goods' price label from pools, thus bringing pool ownership within reach of more modest budgets. We are official agents for several leading brands of materials and equipment.

Show us your basic design idea and we will tell you if it is feasible and how much it will cost. We can provide a cost breakdown enabling you to choose to take on some of the work yourself, or with your own team of trusted labour. We can of course provide any level of help. We can also offer a complete turn-key solution. Either way, whether you would like a dip-pool for the kids or a very large commercial pool for your hotel or resort, you will make significant savings.

We can always send you a preliminary estimate, but there are often unexpected extras involved with building a pool, therefore a visit to your site is essential to be able to give an accurate quotation. These extras could be incurred for reasons such as special engineering for pools on sloping or very uneven ground, or construction sites with limited access for large vehicles. For example, sometimes a garden wall may need to be partly demolished and rebuilt, or perhaps the garden will need re landscaping. Underground services such as electricity, water mains, and drainage may have to be rerouted. Special solutions often have to be found for locating the pumping and filtration machinery.

Sometimes the distance may involve a surcharge, and the cost of materials, which have to be obtained locally, can vary significantly in different parts of the country, but our solutions are **always extremely competitive** without any compromise in quality.

The final cost will always depend on your choice of finish for the tiles and decking and whether you opt for a simple skimmer system or a balance tank system. Regular maintenance of your pool is not highly technical and you can easily do this yourself. However, as upcountry areas rarely have pool service firms, and if you plan on being away for extended periods, you may wish to include a higher level of automation in your pool system.

All our pools can include a computer controlled pumping, and chlorination system as standard, together with a high performance filter medium. This reduces maintenance by up to 90 per cent and you will practically never need to buy chemicals. Fill your pool, switch on, and forget!
